

Function / Marriage Hall — Alternate-Use Layout (private planning note)

Private planning document — keep separate from the biochar DPR and out of any DIC/bank submission. This shows how the **same building shell** (the ~9,000 sq ft single clear-span hall on the 38-cent corner plot, roads on south & east) can serve as a **function / marriage hall**. It reuses the *fixed* structures of the biochar unit so a future changeover is minimal:

Biochar (as-built, fixed)	Function-hall use
North process & utilities stretch (power, water, plumbing, stack)	Kitchen + service + power (north, fixed)
West rooms (lab, QC, office, secure store)	Rooms behind the stage — bride, groom, relatives
North-west toilet / handwash block	Guest toilets & handwash (shared)
Large open working floor + movable partition	Function hall + dining , split by the movable partition

1. Orientation & Vastu basis

Plot is a near-square **corner plot with roads on the south and east**. Guests enter from the **east** (auspicious); the **stage runs along the west**, so the **couple on stage faces east**.

Element	Placement here	Vastu note
Stage / dais	West, full stretch (except the kitchen/NW portion)	✓ Stage in West → couple faces East
Main entrance	East (from east road)	✓ East entry is ideal
Bride / groom rooms	West, behind the stage backdrop	✓ Couple/green rooms toward West / SW
Toilets & handwash	North-west	✓ Toilets in NW/West
Water / borewell	North-east	✓ Water in NE
Kitchen + power/service	North, full stretch (fixed)	Practical (all power/plumbing/sewage on N & W). <i>Vastu ideal for cooking is SE; placed north here by choice for services — acceptable trade-off.</i>
Dining	Centre/east of the hall , beside the function area	Served from the north kitchen

2. Zoning (single ~9,000 sq ft hall)

- North stretch — Kitchen + service + power (fixed, ~15-20%, ~1,500 sq ft).** Cooking, prep, wash-up, service counters opening to the dining side; exhaust/chimney at the north; the electrical board and plumbing/sewage run along the **north and west**. **No partition to the hall is required now — it can be added later.**
- West strip — Stage + rooms.** The **stage** runs the full west length (except the kitchen/NW). **Behind the stage backdrop:** a **bride's room**, a **groom's room** and **1-2 relatives'/green rooms** (these are the biochar unit's lab/office/store rooms). **Toilets & handwash** at the **north-west**.
- Main hall — Function/Marriage hall + Dining (as large as possible).** One large clear-span space in front of the stage, divided by a **single movable partition**:
- Function/marriage side (larger)** — seating faces the west stage.
- Dining side (smaller, ~¼ of the gathering)** — when the ceremony ends, **open/roll back the movable partition to enlarge the dining area.**

3. Indicative capacity

- Function/marriage hall:** ~600 guests (theatre/loose seating), stage on the west.
- Dining:** seated for ~¼ of the gathering (~150) at a time; **expandable** by opening the movable partition after the ceremony.

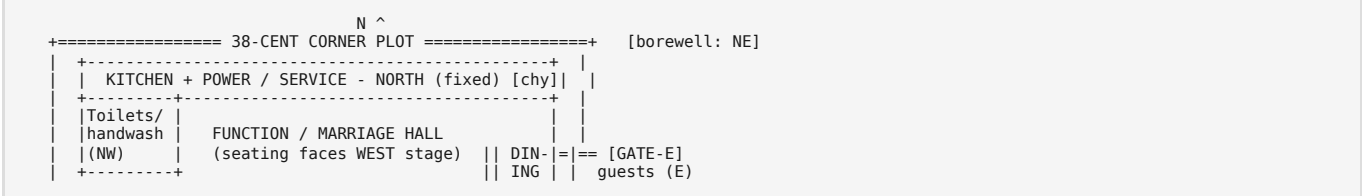

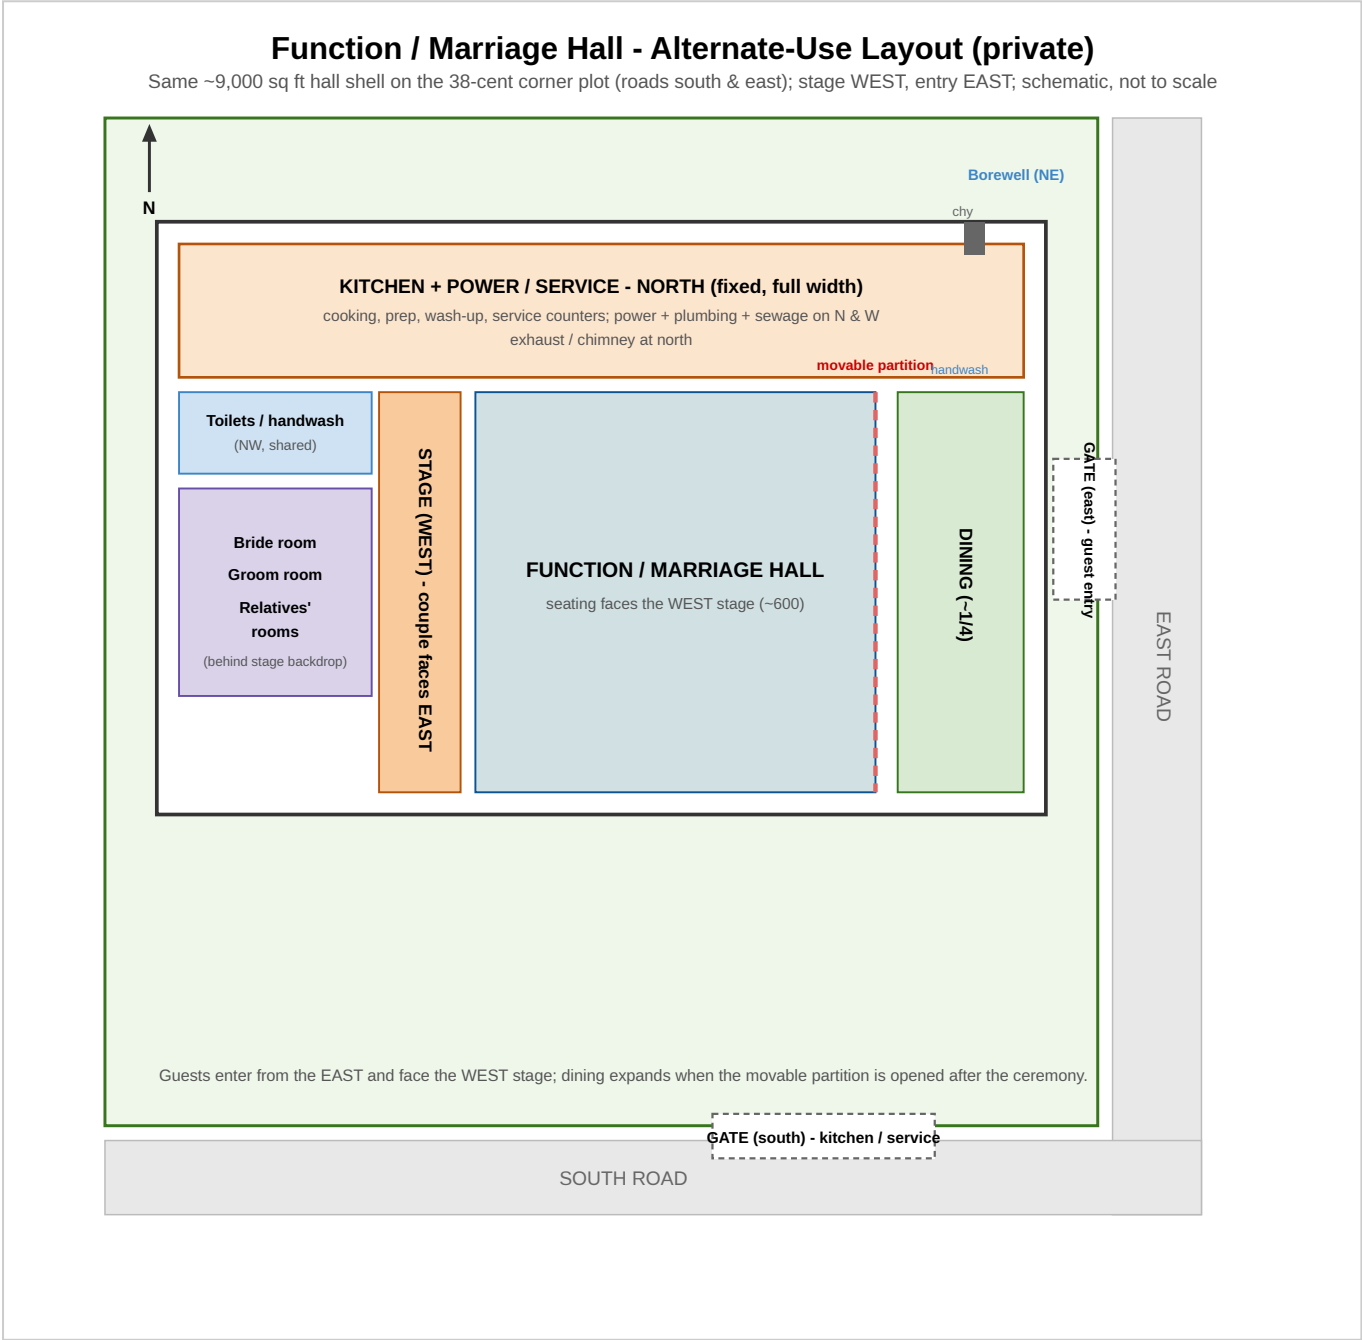

- Two service flows via the corner plot: **guests from the east gate, kitchen/service from the south gate.**

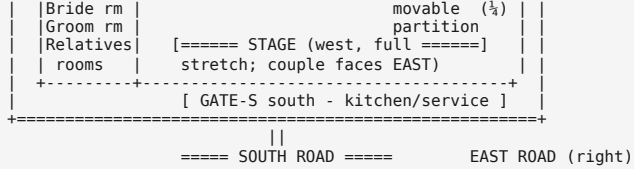

4. Fixtures & services checklist

- Kitchen (north):** 3-phase power, gas bank, water supply + drainage, wash-up, cold store, service counters, exhaust hood + chimney.
- Handwash:** counters at the **dining-kitchen edge** (multiple basins) + at the toilet block.
- Toilets (NW, shared, fixed):** separate **ladies** and **gents** blocks, each with multiple WCs + wash basins; usable by both the hall and the biochar unit.
- Stage (west):** raised dais + backdrop; power for lighting/AV; access to the rooms behind.
- Rooms behind stage:** bride room + groom room (attached wash where possible) + relatives'/green room.
- Dining:** open floor beside the function hall; buffet counters fed from the north kitchen.
- Movable partition:** one sliding/folding partition between the function and dining zones (the only movable divider; everything else is fixed).

5. Layout diagram

marriage-hall-layout.svg (open in any browser). Text schematic:

(The stage sits in front of the west rooms; guests seated in the function hall face west toward the stage while the couple on the stage faces east. Dining is the smaller sub-zone; opening the movable partition merges it with the function hall for a larger dining setup.)
